

AXIOMA OS · MB GEN AI · HOLDING MANAGEMENT

AXIOMA RADAR

See the whole holding. Act ahead of problems.

Generative AI that runs the holding: the entire business on one screen, risks visible before they turn into losses, decisions driven to a measurable result — **entirely inside your own perimeter.**

AXIOMA AI

The owner is the last to hear about problems in the business

Data is scattered across accounting systems, spreadsheets and meetings. The consolidated picture is assembled by hand — so margin erosion and stuck receivables surface only once the money is already gone.

WEEKS

The picture is built by hand

Consolidating divisions into one picture takes **weeks** — and it's stale by the time it lands.

AFTER THE FACT

The loss shows up after the loss

Deviations surface **in hindsight**, once the outcome can no longer be changed.

BLIND

Decisions made on verbal reports

The big calls run on hearsay, **not on reconciled numbers**.

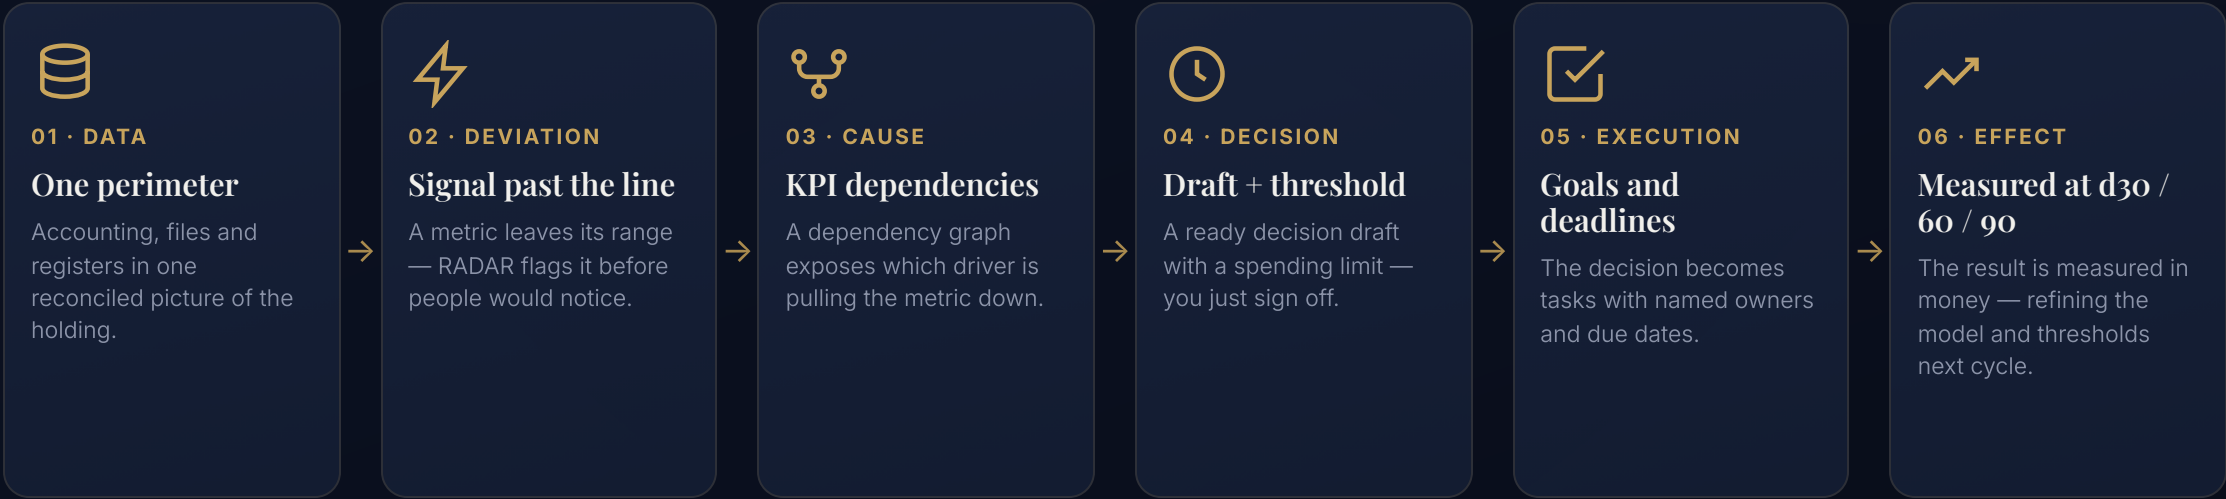

FRAGMENTED

Every division has its own truth

No single language of numbers: versions diverge, **no one is on the hook**.

From a problem signal to a measured result

One loop carries a metric through a closed cycle and records every step. Not a report for its own sake — management driven to effect. And the system gets sharper with every decision.

A plain-language question — an answer with numbers and a source

No report to build, no data schema to learn. Ask as you would a colleague — and get an answer with numbers, reasoning and a link to the primary source. No analyst in between.

QUESTION

"What's happening with sales in April?"

Trends by channel and division with the causes behind the drop — **instantly, no exports.**

QUESTION

"Where are the upside opportunities?"

Gaps to benchmark, under-earned margin and growth points — **ranked by money.**

QUESTION

"What happens to P&L if we raise price 5%?"

A scenario with elasticity — **consequences visible before the decision**, not after.

ANSWER · EXAMPLE

"Top-3 receivables risks"

Retail — **214M ₱, 90 days**; logistics — 71% concentration on one client; dairy — overdue coincides with margin drop. **Linked to the source register.**

RADAR reacts before a problem becomes a loss

Every metric has an allowed range. Crossing it fires a ready scenario — the routine runs itself, and only the calls that matter are left for you.

24/7 CONTROL

Thresholds on any metric

Alerts to **Telegram, e-mail or the feed**. The system catches recurring dips on its own.

PLAYBOOKS

Response with no manual start

A standard deviation fires a ready scenario **on its own, hands-off**.

AUTO-ACTIONS

Notify » draft » task

The chain runs itself; no response in time means **it escalates upward**.

HUMAN IN THE LOOP

Big calls wait on your word

Decisions above a limit wait for sign-off. Every trigger is **logged for audit**.

See exactly how much the holding leaves on the table

Every metric measured against the national average, the global average and best-in-class across 81 industries. The gap to benchmark is money on the table — and yours to take.

81

industries with benchmarks: crop, dairy, aquaculture, logistics, retail and 76 more

4

levels of comparison: your holding · national average · global average · best-in-class

◇ The gap is the upside

The distance to benchmark is **under-earned profit in money**, not an abstraction.

◇ EBITDA against the market

Holding profitability shown instantly against national, global and leaders — **no manual benchmarking**.

◇ Fresh FY25 data

Benchmarks stay current — you compare **against today's market**, not last year's.

◇ Prioritized by money

Industries and channels ranked by gap size — **start where the money is**.

Numbers you trust without double-checking

RADAR doesn't hand you pretty but empty estimates. It computes only with sufficient data, every answer is tied to its source, key coefficients are verified twice. No invented numbers.

DATA THRESHOLD

Computes on facts only

History **of 12+ months** and meaningful variation. Otherwise, honestly: "cannot compute" — never a guess.

SOURCE

Every figure is verifiable

Tied to an accounting export, register or sales file — **any conclusion can be opened and checked.**

CHECKED BEFORE SHOWN

Contradictions come to light

Unreconciled and conflicting data is **surfaced, not buried.**

DOUBLE VERIFICATION

Confirmed twice

Key coefficients are recomputed by a **second, independent method**, not a single pass.

Your data never leaves your perimeter

RADAR runs on-premise on local models. The holding's reporting never goes to public clouds or third-party jurisdiction — no external kill switch, full GDPR compliance.

ON-PREMISE

Inside the holding's perimeter

Accounting data and files **never leave your server**. No path to a public cloud, ever.

LOCAL LLMs

Open-source · EU-hosted

Open models you run yourself — **no third-party API** that gets switched off or rewrites its terms on you.

COMPLIANCE

Protection by default

Personal-data encryption, localization, role-based access and an **audit log** — built in, not an add-on.

FINE-TUNING

Adapted to your holding

The model absorbs your group's data and terminology — **without leaving the perimeter**.

Not a dashboard. A control panel for the holding.

CAPABILITY	THE USUAL WAY	AXIOMA RADAR
Consolidated picture	by hand, weeks	automatic, minutes
Reaction to risk	after the fact, once losses hit	preventive, before the loss
Access to data	via analysts and exports	a plain-language question
Reliability	whatever the model spat out	computes with data · double-checked · sourced
Data	in someone else's cloud	on-premise · sovereign
Status	a rented subscription	your asset · fine-tuned to the holding

See the whole holding. Act ahead of problems.

A pilot on your holding's own data: we'll show the single picture of the group, the deviations and the effect of decisions on your real case — inside your perimeter, with no data leaving it. The first picture in weeks, not quarters.
